

HUSH-BAR Resilient Bars

General

For Hush-Bar Resilient Bars

Should you have any technical questions prior to or during installation, please call 0151 933 2026 for friendly and straightforward advice.

Ensure joists are level prior to fixing.

Fixing the Bars

Install the Hush-Bars at either 450mm or 600mm centres, as specified, and at 90 degrees to the joists. Use 36mm domed head screws for securing to joists. Bars can be butt jointed or a slight gap can be left between the ends of bars. Do not overlap joints.

Leave a minimum gap of 15mm at the end of the bar runs and ensure that perimeter bars do not contact the walls/ceiling.

Fixing the Plasterboard

Fix two layers of specified plasterboard to the bars using self drilling drywall screws, staggering all joints and sealing all perimeters with Gyproc sealant prior to skimming.

Do not allow screws to penetrate into anything other than the resilient bar.

Safety

Use protective gloves when handling - beware of sharp edges.

Technical Advice

For advice on the specification or use of Hush-Bars within any project, please contact our experienced technical team on **0151 933 2026** who will be happy to give comprehensive and practical advice to meet with your requirements.
