

HUSH-FILL 60 Heavy Pugging

General

For Hush-Fill 60 Heavy Pugging

Should you have any technical questions prior to or during installation, please call 0151 933 2026 for friendly and straightforward advice.

Fitting the Hush-Fill

When fitting to bare joists screw 9mm plywood to the underside to support the Hush-Fill. To existing joists, where the ceiling is to remain in place, fit noggins/dwangs in between the joists and construct a shelf with 9mm plywood or similar.

The Hush-Fill tubes are then laid over the plywood. Slit the bags and ensure that all areas are covered to a consistent depth of 60mm. The bags are left in place as liners.

A consistent 60mm depth must always be achieved and the bags have printed instructions on how to adjust if joist centres vary.

Safety

Joist loadings must always be checked by a structural engineer prior to specification or use.

Hush-Fill 60 must never be installed directly onto a plasterboard or lath and plaster ceiling, supporting shelves should be constructed – see fitting instructions.

Hush-Fill 60 tubes weigh approximately 25kg each and care must be taken when manually handling and lifting.

Technical Advice

For advice on the specification or use of Hush-fill 60 within any project, please contact our experienced technical team on **0151 933 2026** who will be happy to give comprehensive and practical advice to meet with your requirements.
